1913 I St., N.W., Washington, D.C. 20006

EX OFFICIO

HELEN R. WHITELEY, President (1975–1976)
J. MEHSEN JOSEPH, Secretary

HARLYN O. HALVORSON, Vice-President (1975–1976)
BRINTON M. MILLER, Treasurer

Applied Microbiology, a publication of the American Society for Microbiology, 1913 I St., N.W., Washington, D.C. 20006, is devoted to the advancement and dissemination of applied knowledge as well as ecological knowledge, both applied and fundamental, concerning microorganisms. Applied Microbiology is published monthly, two volumes per year. The nonmember subscription price is $60 (foreign, $61) per year. The membership subscription price is $13 per year. Single copies are $6.00 (foreign, $6.25). Correspondence relating to subscriptions, nonreceipt of journals, reprints, defective copies, availability of back issues, and lost or late proofs should be directed to the ASM Publications Office, 1913 I St., N.W., Washington, D.C. 20006 (area code 202 833-9416)

Correspondence. Submit manuscripts in duplicate (original and one copy) to ASM Publications Office, 1913 1 St., N.W., Washington, D.C. 20006.

General policy. Any manuscript submitted must be a report of unpublished original research, which is not being considered for publication elsewhere. Each manuscript should present the results of an independent, cohesive study; numbered "series" papers are discouraged.

The "editorial style" of Applied Microbiology essentially follows the CBE Style Manual (3rd ed., AIBS, 1972). Genetics symbols should essentially follow the recommendations of Demerec et al. (Genetics 54:61, 1966). Biochemical nomenclature, including abbreviations and symbols, should follow the recommendations of the IUPAC-IUB Commission on Biochemical Nomenclature (CBN) and the Instructions to Authors of J. Biol. Chem. and Arch. Biochem. Biophys. (first issue of each year), which are based upon the CBN Recommendations and contain a list thereof. Reprints of these Recommendations and advice on biochemical and chemical nomenclature are available from the NRC Office of Biochemical Nomenclature (W. E. Cohn, Director), Biology Division, Oak Ridge Nat'l. Lab., Box Y, Oak Ridge, Tenn. 37830 (phone: 615-483-8611, Ext. 3-7514). Normally, abbreviations (except those of standard units of measurement and symbols of the elements) should be defined and introduced parenthetically at first use in the text. Enzyme activities should be expressed in the terms set out in CBN's Enzyme Nomenclature (1972) (Elsevier Scientific Publishing Co.). Lengths, weights, volumes, and molarities should make use of the prefixes m, µ, n, and p (for 10^-3, 10^-6, 10^-9, and 10^-12, respectively), where applicable, avoiding such compound prefixes as mµ and µn. Metric units should be employed as much as possible. The Editors reserve the privilege of editing manuscripts to make them conform to the above-mentioned stylistic conventions.

Form of manuscript. All parts of the manuscript should be typed double-space or, preferably, triple-space. Most manuscripts can and should be divided into the following sections: Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgements, and Literature Cited. Only one weight of heading (paragraph lead-in) should be used within each section.

Title. A single statement of the subject of a paper is preferred to a main title-subtitle arrangement. A short version of the title (no more than 46 characters and spaces) should be supplied for use as a running head.

Abstract. An abstract appears at the beginning of each paper. The Abstract should not exceed 250 words.

Literature Cited. In the text, references are cited by number. The Literature Cited section should be typed in alphabetical order, by first author, and numbered. Names of journals are abbreviated according to Bibliographic Guide for Editors & Authors (American Chemical Society, 1974). Literature citations should be restricted to closely pertinent papers. Citations of abstracts, theses, "unpublished data," "personal communications," and "in press" will not be accepted in the Literature Cited.

Tables. Each table should be typed on a separate page. The data should be arranged so that columns of like material read down, not across. The headings should be sufficiently clear so that the meaning of the data will be understandable without reference to the text. Explanatory footnotes are permitted, but detailed descriptions of the experiments are not. The materials and methods used to gain the data should properly remain in the section of that name.

Figures. A complete set of figures, preferably glossy photographs, should accompany each of the two copies of the manuscript. Graphs (submit as photographs) should be finished drawings not needing further artwork or type-setting. Absolutely no part of a graph should be typewritten (except the legend, which should be typed on a separate page). Each figure should be numbered and should include the name of the author, either in the margin or on the back (marked lightly with a soft pencil). All lettering should be done with a lettering set. Most graphs will be reduced to 6.6 cm in width, and all elements in the drawing should be prepared to withstand this reduction. The legend of the figure should provide enough information so that the figure is understandable without reference to the text. Experimental details from Materials and Methods should not be repeated in figure legends.

Nomenclature of microorganisms. In general, the nomenclature for bacteria presented in Bergey's Manual of Determinative Bacteriology (8th ed., 1974) is used. If an author challenges this nomenclature, his own judgment will be followed, but the name in Bergey's Manual should follow in parentheses the first time the name is used in the text and in the Abstract. Papers which include extensive taxonomic material (e.g., description of new taxa) will not be published in this journal. The proper place for publication of taxonomic material is the International Journal of Systematic Bacteriology (IJSB), which is published by the ASM for the International Association of Microbiological Societies. If the main thrust of such a paper is not taxonomy, the paper should be divided, the taxonomy portion being submitted to IJSB and the other portion to this journal.

Notes. The accepted form for Notes is somewhat different from the foregoing. Contributors should consult a recent issue of Applied Microbiology for style. Notes should not exceed 500 words. The abstract should not exceed 25 words.

Copyright. Once a paper has been published in Applied Microbiology, which is a copyrighted publication, the legal ownership of all parts of the paper, including the illustrations, has passed from the author to ASM. If the same author, or any author, wishes to republish material previously published in Applied Microbiology, he must first receive written permission from ASM.

Reprints. Reprints (in multiples of 100) may be purchased by contributors. A table showing the cost of reprints, and an order form, will be sent with the proof.

EVEN NON-TECHNICIANS CAN COLLECT
REPRODUCIBLE QUANTITATIVE DATA
WITH THE LIGHTWEIGHT, PORTABLE,
TOTA LLY SELF-CONTAINED ROSS
MICROBAN AS-101 MICROBIAL AIR SAMPLER.

A completely self-contained vacuum unit—
requires no additional accessories.
Draws 7 standard cubic feet of air per minute
for consistent data.
Operates on 110 volts, uses any agar medium
in disposable 100 mm x 15 mm plastic petri dishes.
Just plug it in, set the built-in timer, and turn
it on—that’s all there is to it!
Write for complete specifications—including
a very competitive price. Or call 703-439-3271.

| Aspergillus fumigatus | phagocytosis of spores, 44 |
| Aspergillus niger | aspergillin biosynthesis, 909 |
| brewery spent grain liquor, 879 |
| Aspergillus oryzae | extracellular proteinases, 507 |
| Aspergillus parasiticus | aflatoxin production, 52, 581 |
| Aspergillus versicolor | sterigmatocystin production, 702 |
| Aspersillium wentii | emodin isolation, 26 |
| Aureobasidium pullulans | semisolid fermentation, 930 |
| Autecology | autoradiography and FA, combined, 676 |
| Autoradiography and immunofluorescence | autecology of Nitrobacter, 676 |
| Azotobacter vinelandii | TMPD oxidase reaction, 951 |
| Bacillus | 3-hydroxybenzoate degradation, 439 |
| Bacillus cereus | heat resistance, 943 |
| ileal loop reactive, 943 |
| macromolecular synthesis, 862 |
| Bacillus megaterium | 2,4,5-T distribution, 959 |
| Bacillus popilliae | spore development, 20 |
| Bacillus pumilus | in white petrolatum and a hydrophilic ointment, 514 |
Bacillus sphaericus
in white petrolatum and a hydrophilic ointment, 714
Bacillus steathermophilus
sporulation, 1
Bacillus subtilis
cephalosporin acetylesterase production, 413
Bacillus thuringiensis
γ-amino butyric acid pathway and tricarboxylic acid cycle activity, 489
metalloprotease, 354
spore and crystal separation, 1052
Bacterial flora of skin
antibacterial soap, 551
Bacillus thuringiensis
y-aminobutyric acid pathway and tricarboxylic acid cycle activity,
metalloprotease, 354
spore and crystal separation, 1052
Bacterial flora of skin
antibacterial soap, 551
Bacterium
low-temperature irradiation, 811
vegetative bacteria, 242
Benzoic acid
uptake by S. cerevisiae, 503
BHK-21 cells
challenge by JEV, 433
growth in shaker cultures, 433
Biodegradation
screening test for LAS, 922
Brevibacterium ammoniagenes
guanosine polyphosphate accumulation, 480
Brewery spent grain liquor
A. niger, 879
Brewing
ochratoxin A, 1048
Brewer's wort
fermentation by S. carlsbergensis, 970
Bright greenish-yellow fluorescence
afatoxin indicator, 337
Broiler carcasses
microbiological sampling, 290
Broiler chickens
dietary ochratoxin A, 48
Cancer magister
microbial composition, 72
Candida utilis
semisolid fermentation, 930
Canned food
ileal loop reactive B. cereus, 943
Carbohydrate catabolism
Agrobacterium strains, 731
Carotene biosynthesis
P. blakesleeanus, 988
Cassava
protein-enriched feed, 897
Cell disruption
liquid nitrogen cryo-impacting, 445
Cellulase production
Clostridium sp., 346
Cellulose microfibrils
Rhizobium, 123
Cellulolytic thermophiles
growth conditions, 276
Cephalosporin acetylesterase
B. subtilis, 413
Cephalosporium charticola
glucoamylase, 163
Chemostat culture
E. coli K-12, 267
Chesapeake Bay
fecal indicator organisms, 625
microbial indicators and pathogens, 771
V. parahaemolyticus, 251
Chestnuts
Aspergillus and Penicillium isolates, 536
emodin isolation, 26
Chicken embryos
sterigmatocystin, 589
Chloromycetin
Salmonella-Arizona-infected turtle eggs, 791
Clostridial inhibitors
added iron, 768
Clostridium
cellulase production, 346
Clostridium botulinum
fresh mushrooms, 964
inhibition by C. perfringens, 319
Clostridium botulinum toxin
detection by local paralysis, 420
Clostridium perfringens
C. botulinum inhibition, 319
heat-injured spores and repair, 873
nitrite inhibitor, 838
type D toxin, 499
Clover root hairs
Rhizobium-induced infection threads, 1003
Coli-Count Samplers, evaluation
total and fecal coliform counting, 881
Coliform bacteria
gas chromatographic presumptive test, 584
Coliform growth
optimum membrane structures, 685
Coliform source
membrane filter evaluation, 727
Coliforms, total and fecal
Coli-Count Sampler, evaluation, 881
Colloidal solids
association of enteroviruses, 212
Color additives
microwave sanitization, 205
Contaminated water
bacteria in catfish, 189
Corn
A. flavus and F. moniliforme, 592
deterioration, 103
fermentation of feedlot waste, 113
Crassostrea virginica
mercury accumulation, 91
Crude oil
bacterial growth, 10
Crude oil composition
biodegradation, 396
Crystalline egg albumin
aerobic sporeformers, 821
Cucumber brine
Pediococcus sp., 1040
Deep sea
  survival of sewage microorganisms, 309
Deep-sea sediment bacteria
  growth and survival, 639
  heterotrophic activity, 639
Deoxycorticosterone
  metabolism, 52
Deoxyribonucleic acid/ribonucleic acid hybridization
  Bdellovibrio, 97
Double-antibody radioimmunoassay
  staphylococcal enterotoxin C1, 525
Drinking water
  virus concentration, 58
Dungeness crab
  microbial composition, 72
Emodin
  from A. wentii, 26
Endotoxin reduction
  barium sulfate adsorption-elution, 333
Enteric bacteria
  brown bullhead catfish, 189
Enterobacter aerogenes
  K. pneumoniae, 258
Enterobacter sp.
  acetoin production, 889
Enterococci
  enumeration in marine waters, 66
Enterotoxin B mutants
  S. aureus, 271
Enteroxviruses
  coloidal solids in water, 212
  municipal solid waste landfill and leachate, 657
  removal from sewage, 223
Environmental variables
  sulfate uptake by aerobic bacteria, 975
Epiphyte algae
  primary productivity, 565
Escherichia coli
  chemostat culture, 267
  effects of anesthetics, 178
  growth kinetics, 994
  survival in estuarine environment, 800
Estuarine environment
  E. coli MC-6, 800
Ethylene diaminetetraacetic acid
  degradation, 327
Extracellular dextranase
  F. moniliforme, 855
Extracellular proteinases
  A. oryzae, 507
Fecal coliforms
  comparison of membrane filters, 697
Fecal material
  L. acidophilus, 541
Feedlot waste
  changes in microflora, 113
  T. viride, 876
Feed refusal factors
  F. roseum 'graminearum,' 362
Fermentation, industrial
  P. radiata bark, 722

Figs
  aflatoxin production, 238
  Firefly assay
    adenine nucleotides, 713
  Fish pen slime
    mucoid bacterial isolates, 450
  Fluorescent-antibody excitation
    evaluation of light source, 616
  Fluorescent-antibody technique
    finger-like zoogloeae, 132
  Fluorescent antibody test, semiautomated
    salmonellae, 557
  Frankfurters
    Staphylococcus and Salmonella, 844
  Freshwater lake, oligotrophic
    epiphytic algae, 565
  Fungal growth on C1 compounds, 343
  Fungal protein
    cassava, 897
  Fusarium
    trichothecene mycotoxin, 5, 38
  Fusarium moniliforme
    extracellular dextranase, 855
    high-moisture corn, 592
  Fusarium roseum 'graminearum'
    feed refusal factors, 362
Gas chromatographic presumptive test
  coliforms in water, 584
  Gamma irradiation
    bacterial spores, inactivation, 514
  Gastrointestinal tract, mice
    free amino acid distribution, 609
Genome size
  S. coelicolor and S. rimosus, 324
Glucosamylase
  C. charticola Landau, 163
Glucobacter
  ripening honey, 893
  3-1-Glucose isomerase
  S. phaseochromogenes mutants, 750
Guanosine polyphosphates
  B. ammoniagenes, 480
Haddock
  Aeromonas isolation, 120
  Heat inactivation
    influence of pH, 755
    staphylococcal enterotoxin A, 755
  Heat resistance
    B. cereus, 943
    spoilage organisms, 369
  Helminthosporium maydis
    high-moisture corn, 103
  Honey, ripening, 893
  Host-parasite systems
    RNA turnover, 97
Household toilets
  bacteria and viruses, 229
  HT-2 toxin
    formation in liquid culture, 33
Human fecal flora
deoxy corticosterone metabolism, 82

Hydrocarbons
oil-rich salt marsh sediments, 982

Hydrogen peroxide
spacecraft isolates, 710

Hydrophobic grid-membrane filters
bacterial enumeration, 519

3-Hydroxy benzoate
degradation by Bacillus, 439

Hydroxysteroid dehydrogenase
enzymatic transformation of morphine, 650

Ictalurus nebulosis
in contaminated waters, 189

Indicator organisms and pathogens
Chesapeake Bay, 625, 771
seasonal distribution, 771

Influenza virus vaccine
endotoxin reduction, 333

Infraspecific variation in bacteria, 282

Insects
sporeforming bacteria, 20

Intestinal bacteria, anaerobic
oxygen and oxidation-reduction, 781

Intracellular proteinase
S. cremoris, 738

Iron
clostridial inhibitor formation, 768
iron-binding compounds
marine ecosystems, 186

Isopropyl alcohol
sterilization by liquid propylene oxide, 483

Japanese encephalitis virus
BHK-21 cells, 433

Klebsiella pneumoniae
differentiation from E. aerogenes, 258

Lactate dehydrogenase
lactate metabolism, 916
Lactate metabolism
S. ruminantium, 916

Lactobacillus
ripening honey, 893
Lactobacillus acidophilus
detection in feces, 541

Lactoperoxidase system
antibacterial activity, 199

Light source
FA excitation, 616

Linear alkyl benzene sulfonate
biodegradability, 922

Lipids
free-living Rhizobium, 193

Liquid nitrogen cryo-impacting
cell disruption, 445

Listeria monocytogenes
plant-soil environment, 29

Local paralysis
C. botulinum detection, 420
Lotus pedunculatus
free-living Rhizobium, 193

Magnetic filtration
algal removal, 905

Malathion insecticide
soil bacteria, 335

Mannit ol formation by bacteria, 476

Marine bacteria
substrate wettability, 298

Marine ecosystems
specific iron (III)-binding compounds, 186

Marine sediments
methane, 602
methanogenesis inhibition, 707

Marine surface bacteria, repulsion, 1043

Marine waters
enterococci enumeration, 66

Membrane filters
coliform source, 727
grid-printing apparatus, 110

Millipore HC and conventional, 697

Membrane filter technique
enterococci enumeration, 66

Membrane filtration
P. aeruginosa detection, 935

Membrane structures
coliform recovery, 685

Mercury
C. virginica, 91

Metalloprotease
B. thuringiensis, 354

Methane production
shallow-water, marine sediments, 602

Methanogenesis
inhibition by acetylene and ethylene, 707

Methanol-utilizing bacterium
vitamin B12 production, 477

Methyl mercury
formation by bacteria, 424

Methylmercury acetate
R. capsulata inhibition, 156

Methyl violet
differentiation of K. pneumoniae from E. aerogenes, 258

Microbial deconjugation
tau rocholate, 530

Microbiological sampling
total rinse method, 290

Micrococcus
distribution on human skin, 381

Micromethod for anaerobe identification
design and operation, 831
development, 825

Microporous filters
virus concentration, 58

Microwave sanitation
color additives in cosmetics, 205

Milk
activity against gram-negative bacteria, 199

Mink, liver
aflatoxin B, treatment, 946

Moisture loss from agar plates
incubation conditions, 692

Morphine
transformation by Arthrobacter, 262

afatoxin B1, 1034
Single-slide staining device, automated, 485
Sodium nitrite
C. perfringens inhibitor, 838

Soil bacteria
effects of malathion insecticide, 335
Solid-phase radioimmunoassay
C. perfringens type D toxin, 499
staphylococcal enterotoxin C, 700

Soluble antigens
B. trifoli, 172

Spacecraft areas
psychrophilic microorganisms, 546
Spacecraft isolates
effect of hydrogen peroxide, 710
Staphylococcal enterotoxin A
heat inactivation and pH, 755

Staphylococcal enterotoxin C
double-antibody radioimmunoassay, 525
solid-phase radioimmunoassay, 700

Staphylococcus
distribution on human skin, 381
frankfurters with and without nitrite, 844

Staphylococcus aureus
enterotoxin B-producing mutants, 271
Sterigmatocystin
Aspergillus, 589
semisynthetic media, 702
toxicity to chicken embryos, 589
Streptococcus cremoris
intracellular protease, 738

Streptococcus sanguis
amino acid requirements, 374
proteolytic activity, 374

Streptomyces
genome size, 324

Streptomyces phaeochromogenes
repression-resistant mutants, 750

Streptovercilitum rubrjeticiuli
prodigine pigments, 807

Substrate input
rumen continuous culture, 330
Substrate wettability
marine bacteria, 298

Sulfate uptake
aerobic bacteria, 975

Taurocholate
microbial deconjugation and 7α-OH bioconversion, 530

Temperature-differential egg dip
terramycin and chloromycetin treatment, 791
Temperature recorder, dual channel, 746

Terramycin
Salmonella-Arizona-infected turtle eggs, 791

Tetramethyl-p-phenylenediamine oxidase
A. vinelandii, 946

Thermal gradients
obligate thermophilic bacteria, 152

Thermal resistance
airborne bacterial spores, 786

Thermophilic bacteria
man-made and thermal gradients, 152

Thiobacillus
acid mine water, 884

Torulopsis colliculosa
acetoin production, 889

Toxigenic fungi
in food, 159

Toxin
antibody determination, 499
C. perfringens, 499

Toxin Z
P. aeruginosa, 293

Tricarboxylic acid cycle activity
B. thuringiensis, 489
2,4,5-Trichlorophenoxyacetic acid
B. megaterium, 939

Trichoderma ligneum
amino acid composition, 343
methanol utilizing, 343
Trichoderma viride
feedlot waste, 876
semisolid fermentation, 930
Trichothecene mycotoxins
Fusarium sp., 5
microbial modifications, 38
T-2 toxin
formation in liquid culture, 33

Ultrahigh temperature
C. perfringens spores, 873
Ultra-pure water-distilling system, 704
Ustilago maydis killer proteins, 694

Vibrio parahaemolyticus
Chesapeake Bay, 251

Virus-like particles
P. citrinum, 149
Vitamin B₁₂
methanol-utilizing bacterium, 476

Water
colloidal solids, 212
Wine composition
heat resistance of spoilage organisms, 369

X-ray contrasting agents
B. thuringiensis spores and crystals, 1052

Zoogloeae, finger-like
fluorescent-antibody study, 132
# Contents for July

## General Microbial Ecology

Application of the Deoxyribonucleic Acid/Ribonucleic Acid Hybridization Technique in *Bdellovibrio* as a Model for Studying Ribonucleic Acid Turnover in Host-Parasite Systems. **M. Mark Engelking and Ramon J. Seidler**...... 97

Production of Cellulose Microfibrils by *Rhizobium*. **Carolyn Napoli,** * Frank Dazzo, and David Hubbell* .............................................. 123

Fluorescent-Antibody Study of Natural Finger-Like Zoogloeae. **Samuel R. Farrah** * and Richard F. Unz* .............................................. 132

Types and Distribution of Obligate Thermophilic Bacteria in Man-Made and Natural Thermal Gradients. **Robert F. Ramaley** * and Keith Bitzinger*...... 152

## Applied Environmental and Public Health Microbiology

Sequential Growth of Bacteria on Crude Oil. **Amikam Horowitz, David Gutnick, and Eugene Rosenberg*** .......................... 10

Incidence of *Listeria monocytogenes* in Nature. **J. Weis and H. P. R. Seeliger*** .............................................. 29

Comparative Study of Four Microporous Filters for Concentrating Viruses from Drinking Water. **Walter Jakubowski,** * William F. Hill, Jr., and Norman A. Clarke* .............................................. 58

Membrane Filter Technique for Enumeration of Enterococci in Marine Waters. **M. A. Levin,** * J. R. Fischer, and V. J. Cabello* .................. 66

Role of Bacteria in Bioaccumulation of Mercury in the Oyster *Crassostrea virginica*. **G. S. Sayler, J. D. Nelson, Jr., and R. R. Colwell** * .................. 91

Machine for Printing Hydrophobic Grids on Membrane Filters. **A. N. Sharpe* .............................................. 110

Growth Inhibition of *Rhodopseudomonas capsulata* by Methylmercury Acetate. **Thomas W. Jeffries** * and Richard G. Butler* .............................................. 156

## Food Microbiology and Toxicology

Microbiological Characteristics of Dungeness Crab (*Cancer magister*). **J. S. Lee** * and D. K. Pfeifer* .............................................. 72

Deterioration of High-Moisture Corn. **Michael E. McMahon, Paul A. Hartman,** * Robert A. Saul, and Lois H. Tiffany* .............................................. 103

Changes in Microbial Population During Fermentation of Feedlot Waste with Corn. **G. R. Hrubant* .............................................. 113

Isolation of *Aeromonas* Sp. ATCC 29063, a Phenol-Producing Organism, from Fresh Haddock. **T. C. Chen and R. E. Levin*** .............................................. 120

## Mycotoxins

Production of Trichothecene Mycotoxins by *Fusarium* Species in Shake Culture. **Y. Ueno,** * M. Sawano, and K. Ishii* .............................................. 4

Emodin, a Toxic Metabolite of *Aspergillus wentii* Isolated from Weevil-Damaged Chestnuts. **John M. Wells,** * Richard J. Cole, and Jerry W. Kirksey* .............................................. 26

Assay and Relationship of HT-2 Toxin and T-2 Toxin Formation in Liquid Culture. **Frank N. Kotsonis and Robert A. Ellison*** .............................................. 33

* Asterisk refers to person to whom inquiries regarding the paper should be addressed.
Comparative Studies on Microbial and Chemical Modifications of Trichothecene Mycotoxins. Takumi Yoshizawa* and Nobuichi Morooka .................................................. 38

Effect of aflatoxin on phagocytosis of Aspergillus fumigatus spores by rabbit alveolar macrophages. J. L. Richard* and J. R. Thurston .................................................. 44

Nephrotoxicity of dietary ochratoxin A in broiler chickens. W. E. Huff, R. D. Wyatt, and P. B. Hamilton* .................................................. 48

Effects of Trace Metals on the Production of aflatoxins by Aspergillus parasiticus. Paul B. Marsh,* Marion E. Simpson, and Mary W. Trucksees ............... 52

Toxigenic Fungi in Food. N. D. Davis, R. E. Wagener, D. K. Dalby, G. Morgan-Jones, and U. L. Diener* .159

Metabolism and Products

Effect of pH on Sporulation of Bacillus stearothermophilus. S. Yazdany* and K. B. Lashkari .................................................. 1

Physiology of sporeforming bacteria associated with insects: Metabolism of Bacillus popilliae grown in third-instar Popillia japonica Newman larvae. Grant St. Julian, Lee A. Bulla, Jr.,* and Richard S. Hanson .................................................. 20

An Unstable Strain of Aspergillus foetidus segregating proline auxotrophs. L. T. Chang and R. W. Tuveson* .................................................. 140

Presence of Two Virus-Like particles in Penicillium citrinum. L. Voltterra,* A. Cassone, A. Tonolo, and M. L. Bruzzone .................................................. 149

Erratum

Effects of bicarbonate on growth of Neisseria gonorrhoeae: Replacement of gaseous CO2 atmosphere. Richard S. Talley and Clarence L. Baugh ............... 162

Volume 30 Contents for August Number 2

General Microbial Ecology

Antigenic Differences between infective and noninfective strains of Rhizobium trifolii. Frank B. Dazzo* and David H. Hubbell .................................................. 172

Evidence for the occurrence of specific iron (III)-binding compounds in near-shore marine ecosystems. Marilyn Estep, James E. Armstrong, and C. Van Baalen* .................................................. 186

Neutral lipids and phospholipids of free-living and bacteroid forms of two strains of Rhizobium infective on Lotus pedunculatus. T. Gerson* and J. J. Patel .................................................. 193

Principal component analysis of infraspecific variation in bacteria. Gary Darland .................................................. 282

Influence of substrate wettability on the attachment of marine bacteria to various surfaces. S. C. Dexter,* J. D. Sullivan, Jr., J. Williams, and S. W. Watson .................................................. 298

Automatic pH control and soluble and insoluble substrate input for continuous culture of rumen microorganisms. Leonard L. Slyter .................................................. 330

Applied Environmental and Public Health Microbiology

Antibodies against enteric bacteria in brown bullhead catfish (Ictalurus nebu-
Microwave Sanitization of Color Additives Used in Cosmetics: Feasibility Study. S. B. JASNOW* AND J. L. SMITH .......................... 205

Association of Enteroviruses with Natural and Artificially Introduced Colloidal Solids in Water and Infectivity of Solids-Associated Virions. S. A. SCHaub AND B. P. SAGIR* ........................................ 212

Removal of Enteroviruses from Sewage by Bench-Scale Rotary-Tube Trickling Filters. NORMAN A. CLARKE* AND SHIH LU CHANG ................. 233

Microbiological Hazards of Household Toilets: Droplet Production and the Fate of Residual Organisms. CHARLES P. GERBA, CRAIG WALLIS, AND JOSEPH L. MELNICK* ........................................... 229

Incidence of Vibrio parahaemolyticus in Chesapeake Bay. TATSUO KANEKO AND R. R. COLWELL* ........................................ 251

Methyl Violet: a Selective Agent for Differentiation of Klebsiella pneumoniae from Enterobacter aerogenes and Other Gram-Negative Organisms. LUCY M. CAMPBELL AND IVAN L. ROTH* ........................................ 258

Survival of Human Enteric and Other Sewage Microorganisms Under Simulated Deep-Sea Conditions. JOHN A. BAROSS,* F. JOE HANUS, AND RICHARD Y. MORITA ........................................ 309

Microbial Degradation of Ethylenediaminetetraacetate in Soils and Sediments. JAMES M. TIEDJE ........................................ 327

Effects of a Commercial Malathion Preparation on Selected Soil Bacteria. G. J. STANLAKE AND J. B. CLARK* ........................................ 335

Food Microbiology and Toxicology

Antibacterial Activity of the Lactoperoxidase System in Milk Against Pseudomonads and Other Gram-Negative Bacteria. L. BJÖRK,* C-G. ROSEN, V. MARSHALL, AND B. REITER ........................................ 199

Characterization of Radiation-Resistant Vegetative Bacteria in Beef. ARDYCE B. WELCH* AND R. B. MAXCY ........................................ 242

Column Chromatography and Cell Culture Assay of Pseudomonas aeruginosa Toxin Z Preparations. PETER P. LUDOVICI,* FRANK A. ROINESTAD, AND FRANCIS S. WONG ........................................ 293

Inhibition of Clostridium botulinum by Strains of Clostridium perfringens Isolated from Soil. LOUIS DS. SMITH ........................................ 319

Improvements in a Non-Proprietary Radiometric Medium to Allow the Detection of Some Pseudomonas Species and Alcaligenes faecalis. JOSEPH J. PREVITE,* D. B. ROWLEY, AND R. WELLS ........................................ 339

Mycotoxins

Aspergillus flavus Infection and Aflatoxin Production in Fig Fruits. J. R. BUCHANAN,* N. F. SOMMER, AND R. J. FORTLAGE ........................................ 238

Bright Greenish-Yellow Fluorescence and Aflatoxin in Agricultural Commodities. R. J. BOTHAST AND C. W. HESSELTINE* ........................................ 337

Metabolism and Products

Isolation and Some Properties of Glucoamylase from Cephalosporium charticola Lindau. MARIA KRZECOWSKA AND HENRYK URBANEK* ........................................ 163
Survival of Frozen Mycoplasmas. Moshe Raccach, Shlomo Rottem, and Shmuel Razin* .................................................. 167

Comparative Effects of Anesthetics on the Viability and Integrity of Escherichia coli ML30. B. A. Prior, O. Fennema,* and E. H. Marth ......................... 178

Chemostat Culture of Escherichia coli K-12 Limited by the Activity of Alkaline Phosphatase. Stagg L. King and J. C. Francis* ........................................... 267

Derivation of High Enterotoxin B-Producing Mutants of Staphylococcus aureus from the Parent Strains. Robert A. Altenbern ................................................. 271

Studies on Thermophilic Cellulolytic Fungi. R. A. Romanelli, C. W. Houston,* and S. M. Barnett .......................................................... 276

Estimate of the Genome Size by Renaturation Studies in Streptomyces. Romualdo Benigni, Peter Antonov Petrov, and Angelo Carere* ......................... 324

Reduction of Endotoxin Levels in Influenza Virus Vaccines by Barium Sulfate Adsorption-Elution. Patricia S. Reichelderfer,* Jody F. Manischewitz, Martha A. Wells, Herbert D. Hochstein, and Francis A. Ennis .................. 333

Errata

Persistence and Biodegradation of Spilled Residual Fuel Oil on an Estuarine Beach. R. H. Pierce, Jr., A. M. Cundell, and R. W. Traxler ........................................ 341

Improved Medium for Lactic Streptococci and Their Bacteriophages. Betty E. Terzaghi* and W. E. Sandine .......................................................... 341

Volume 30 Contents for September Number 3

General Microbial Ecology

Distribution and Persistence of Staphylococcus and Micrococcus Species and Other Aerobic Bacteria on Human Skin. Wesley E. Kloos* and Margaret S. Musselwhite ...................................................... 381

Effects of an Abrupt Change in Ration from All Roughage to High Concentrate upon Rumen Microbial Numbers in Sheep. Jean A. Grubb and B. A. DehORITY* .................. 404

Applied Environmental and Public Health Microbiology

Effects of Temperature and Crude Oil Composition on Petroleum Biodegradation. R. M. Atlas .............................................................. 396

Detection of Animal Viruses in Coastal Seawater and Sediments. Silvio De Flora,* Giuseppe P. De Renzi, and Giuseppe Badolati .......................... 472

Food Microbiology and Toxicology

Characteristics of Heavily Mucoid Bacterial Isolates from Fish Pen Slime. T. J. Chai and R. E. Levin* ...................................................... 450

Mycotoxins

Feed Refusal Factors in Pure Cultures of Fusarium roseum 'graminearum.' Frank
CONTENTS xvii

N. KOTSONIS, EUGENE B. SMALLEY, ROBERT A. ELLISON,* AND CAROL M. GALE . . . 362

Isolation of Acetyl T-2 Toxin from Fusarium poae.  FRANK N. KOTSONIS, ROBERT A.
ELLISON,* AND EUGENE B. SMALLEY .......................................................... 493

Metabolism and Products

Fungal Growth on C1 Compounds: a Study of the Amino Acid Composition of a
Methanol-Utilizing Strain of Trichoderma lignorum.  ANDREW WILLETTS ............ 343

Cellulase Production by a Thermophilic Clostridium Species.  B. H. LEE AND T. H.
BLACKBURN* ................................................................. 346

Metalloprotease from Bacillus thuringiensis.  EUGENIA LI AND ALLAN A. YOU-
STEN* ........................................................................... 354

Amino Acid Requirements and Proteolytic Activity of Streptococcus sanguis.
R. A. COWMAN,* M. M. PERRELLA, B. O. ADAMS, AND R. J. FITZGERALD ........ 374

Physical Properties and Kinetic Behavior of a Cephalosporin Acetylesterase Pro-
duced by Bacillus subtilis.  BERNARD J. ABBOTT* AND DAVID FUKUDA .......... 413

Formation of Methyl Mercury by Bacteria.  M. K. HAMDY* AND O. R. NOYES .... 424

Adaptation of BHK-21 Cells to Growth in Shaker Culture and Subsequent Chal-
lenge by Japanese Encephalitis Virus.  LOUIS E. GUSKEY AND HOWARD M.
JENKIN* ........................................................................ 433

Degradation of 3-Hydroxybenzoate by Bacteria of the Genus Bacillus.  RONALD
L. CRAWFORD .................................................................. 439

Liquid Nitrogen Cryo-Impacting: a New Concept for Cell Disruption.  RICHARD
A. SMUCKER AND ROBERT M. PFISTER* .................................................. 445

Separation of Viable Rickettsia typhi from Yolk Sac and L Cell Host Components
by Renografin Density Gradient Centrifugation.  E. WEISS,* J. C. COOLBAUGH,
AND J. C. WILLIAMS ................................................................ 456

Concentration of Rous Sarcoma Virus from Tissue Culture Fluids with Poly-

Detection of Mannitol Formation by Bacteria.  Y. CHALFAN, R. LEVY, AND R. I.
MATELES* ................................................................. 476

Vitamin B12 Production by a Methanol-Utilizing Bacterium.  TETSUO TORAYA,*
BUSABA YONGSMITH, ATSUO TANAKA, AND SABURO FUKUI .............. 477

Fermentative Accumulation of Guanosine Polyphosphates by Brevibacterium
ammoniagenes.  AKIRA FURUYA* AND AKIRA SATO .................................. 480

α-Aminobutyric Acid Pathway and Modified Tricarboxylic Acid Cycle Activity
During Growth and Sporulation of Bacillus thuringiensis.  JOHN N. ARON-
SON,* DAVID P. BORRIS, JEFFREY F. DOERNER, AND EVELYN AKERS ...... 489

Effects of Volatile Compounds from Nematodes on Trap Formation by a Nema-
tode-Trapping Fungus.  SUSAN SCHENCK AND DAVID PRAMER* ............. 496

Methods

Automated Single-Slide Staining Device.  JUDD R. WILKINS* AND STACEY M.
MILLS .............................................................................. 485

Sterilization

Effect of Temperature on the Sterilization of Isopropyl Alcohol by Liquid Prop-
ylene Oxide.  A. HART* AND S. N. NG .................................................. 483

Erratum

Inhibition of Microbial Growth by Fatty Amine Catalysts from Polyurethane
Volume 30  
Contents for October  
Number 4

General Microbial Ecology

Methane Production in Shallow-Water, Tropical Marine Sediments. RONALD S. OREMLAND .................................................. 602
Effect of Microflora on the Free Amino Acid Distribution in Various Regions of the Mouse Gastrointestinal Tract. DIXIE D. WHITT* AND R. D. DEMOSS .................... 609
Factors Affecting the Contribution by Epiphytic Algae to the Primary Productivity of an Oligotrophic Freshwater Lake. RICHARD B. SHELDON AND CHARLES W. BOYLEN* .................................................. 657
Autoradiography and Immunofluorescence Combined for Autecological Study of Single Cell Activity with *Nitro* bacter as a Model System. C. B. FLIERMANS AND E. L. SCHMIDT* .................................................. 676
Specificity of *Ustilago maydis* Killer Proteins. Y. KOLTIN* AND P. R. DAY ................................................................. 694
Inhibition of Methanogenesis in Marine Sediments by Acetylene and Ethylene: Validity of the Acetylene Reduction Assay for Anaerobic Microcosms. RONALD S. OREMLAND AND BARRIE F. TAYLOR* ............................................ 707

Applied Environmental and Public Health Microbiology

Efficacy of the Inactivation of Bacterial Spores in White Petrolatum and a Hydrophilic Ointment by Gamma Irradiation. SIGNE HOLTA ØIE* AND DORIS FYSTRO ..................... 514
Enumeration of High Numbers of Bacteria Using Hydrophobic Grid-Membrane Filters. ANTHONY N. SHARPE* AND GREGORY L. MICHAUD .......................................................... 519
Detection of *Lactobacillus acidophilus* in Feces of Humans, Pigs, and Chickens. S. E. GILLILAND, * M. L. SPECK, AND C. G. MORGAN ........................................... 541
Psychrophilic Microorganisms from Areas Associated with the Viking Spacecraft. TERRY L. FOSTER* AND LUTHER WINANS, JR ................................................................. 546
Effects of an Antibacterial Soap on the Ecology of Aerobic Bacterial Flora of Human Skin. J. G. Voss ................................................................. 551
Studies on the Survival and Fate of Enteroviruses in an Experimental Model of a Municipal Solid Waste Landfill and Leachate. MARK D. SOBSEY, CRAIG WALLIS, AND JOSEPH L. MELNICK* .................................................. 565
Microbial Metabolism of a Parathion-Xylene Pesticide Formulation. DOUGLAS M. MUNNECKE AND D. P. H. HSIEH* ................................................................. 575
Gas Chromatographic Presumptive Test for Coliform Bacteria in Water. JUDITH S. NEWMAN AND R. T. O'BRIEN* ................................................................. 584
Evaluation of a Most-Probable-Number Technique for the Enumeration of *Pseudomonas aeruginosa*. ANITA K. HIGHSMITH* AND ROBERT L. ABSHIRE ................................................................. 596
Distribution and Significance of Fecal Indicator Organisms in the Upper Chesapeake Bay. G. S. SAYLER, J. D. NELSON, JR., A. JUSTICE, AND R. R. COLWELL* .................................................. 625
Optimum Membrane Structures for Growth of Coliform and Fecal Coliform Or-

### Contents for November

#### General Microbial Ecology

- **Nonautotrophic *Thiobacillus* in Acid Mine Water.** Paula S. Myers and W. N. Millar* ........................................ 884

#### Applied Environmental and Public Health Microbiology

- **Influence of Coliform Source on Evaluation of Membrane Filters.** M. H. Brodsky* and D. A. Schiemann .......................................................... 727
- **Detection of Salmonellae in the Environment.** Berenice M. Thomason,* James W. Biddle, and William B. Cherry ........................................... 764
- **Seasonal Occurrence and Distribution of Microbial Indicators and Pathogens in the Rhode River of Chesapeake Bay.** J. F. Carney, C. E. Carty, and R. R. Colwell* .................................................. 771
- **Method for Collecting Naturally Occurring Airborne Bacterial Spores for Determining Their Thermal Resistance.** J. R. Puleo,* M. S. Favero, G. S. Oxborough, and C. M. Herring .................................................. 786
- **Treatment of *Salmonella-Arizona*-Infected Turtle Eggs with Terramycin and Chloromycetin by the Temperature-Differential Egg Dip Method.** R. J. Siebeling,* Philip M. Neal, and W. David Granberry ........................................... 791
- **Effect of Physical Parameters on the In Situ Survival of *Escherichia coli* MC-6 in an Estuarine Environment.** Maria A. Faust,* A. E. Aotaky, and M. T. Hargadon ........................................... 800
- **Evaluation of Coli-Count Samplers for Possible Use in Standard Counting of Total and Fecal Coliforms in Recreational Waters.** Mary Hedberg* and Douglas A. Connor ........................................... 881

#### Food Microbiology and Toxicology

- **Purification and Properties of Intracellular Proteinase from *Streptococcus cremoris*.** Kunio Ohmiya* and Y. Sato .................................................. 738
- **Influence of pH on the Heat Inactivation of Staphylococcal Enterotoxin A as Determined by Monkey Feeding and Serological Assay.** John Y. Humber,* Cleve B. Denny, and C. Wallace Bohrer ........................................... 755
- **Survival of Salmonellae During Pepperoni Manufacture.** James L. Smith,* Charles N. Huhtanen, John C. Kissinger, and Samuel A. Palumbo ........................................... 759
- **Effect of Added Iron on the Formation of Clostridial Inhibitors.** C. N. Huhtanen* and A. E. Wasserman ........................................... 768
- **Identification of a Component of Crystalline Egg Albumin Bactericidal for Thermophilic Aerobic Sporeformers.** D. H. Ashton,* A. A. Wilson, and G. M. Evancho ........................................... 821
- **Inhibitor of *Clostridium perfringens* Formed by Heating Sodium Nitrite in a Chemically Defined Medium.** Dennis M. Moran, Steven R. Tannenbaum, and Michael C. Archer* ........................................... 838
- **Growth of *Staphylococcus* and *Salmonella* on Frankfurters With and Without Sodium Nitrite.** Henry G. Bayne* and H. David Michener ........................................... 844
- **Repair of Heat-Injured *Clostridium perfringens* Spores During Outgrowth.** J. T. Barach,* R. S. Flowers, and D. M. Adams ........................................... 873
Mycotoxins
Influence of Carbohydrate and Nitrogen Source on Patulin Production by *Penicillium patulum.* W. T. STOTT AND L. B. BULLERMAN* .......................... 850
Interaction Between Aflatoxicosis and a Natural Infection of Chickens with *Salmonella.* R. D. WYATT AND P. B. HAMILTON* .......................... 870

Metabolism and Products
Comparison of Methods for Extraction of Bacterial Adenine Nucleotides Determined by Firefly Assay. ARNE LUNDIN* AND ANDERS THORE .................................. 713
Microbial Utilization of *Pinus radiata* Bark. DAVID M. UPDEGRAFF AND W. D. GRANT* ............................................................... 722
Carbohydrate Catabolism of Selected Strains in the Genus *Agrobacterium.* LARRY O. ARTHUR, LAWRENCE K. NAKAMURA, GRANT ST. JULIAN, AND LEE A. BULLA, JR.* .......................................................... 731
d-Glucose Isomerase: Constitutive and Catabolite Repression-Resistant Mutants of *Streptomyces phaeochromogenes.* SERGIO SANCHEZ* AND CARMEN M. QUINTO .................. 750
Differential Effects of Oxygen and Oxidation-Reduction Potential on the Multiplication of Three Species of Anaerobic Intestinal Bacteria. WILLIAM C. WALDEN* AND DAVID J. HENTGES ........................................... 781
Prodiginine (Prodigiosin-Like) Pigments from *Streptovercillium rubrireticuli,* an Organism That Causes Pink Staining of Polyvinyl Chloride. NANCY N. GERBER AND DONALD P. STAHL* .................................................... 807
Development of a Micromethod for Identification of Anaerobic Bacteria. TRACY D. WILKINS* AND CLAY B. WALKER ............................................. 825
Micromethod for Identification of Anaerobic Bacteria: Design and Operation of Apparatus. TRACY D. WILKINS,* CLAY B. WALKER, AND W. E. C. MOORE ............ 831
Characterization of an Extracellular Dextranase from *Fusarium moniliforme.* LLOYD G. SIMONSON,* ANTHONY E. LIBERTA, AND ARLAN RICHARDSON ....................... 855
Effect of Some Inhibitors Derived from Nitrite on Macromolecular Synthesis in *Bacillus cereus.* J. N. HANSEN* AND R. A. LEVIN ........................................... 862
Fibrous Material in Feedlot Waste Fermented by *Trichoderma viride.* T. KANESHIRO,* B. F. KELSON, AND J. H. SLONEKER ............................................. 876
Utilization of Brewery Spent Grain Liquor by *Aspergillus niger.* Y. D. HANG,* D. F. SPLITTSTOESSER, AND E. E. WOODAMS ........................................... 879

Methods
Dual Channel Temperature Recorder. WILLIAM J. EISLER* AND DONALD A. LEBUIS ................................................................. 746
Safe, Convenient Pipetting Station. J. R. SONGER,* D. T. BRAYMEN, AND R. G. MATHIS ............................................................... 887

Volume 30 Contents for December Number 6

General Microbial Ecology
Effects of Three Environmental Variables on Sulfate Uptake by Aerobic Bacteria. RICHARD H. MONHEIMER ........................................... 975
Ultrastructure of *Rhizobium*-Induced Infection Threads in Clover Root Hairs. C. A. NAPOLI* AND D. H. HUBBELL ........................................... 1003
