Supplementary Figure 3: Dose response effect of spiperone on Transductin-DsiRNA delivery in HAE. Cells were treated with spiperone at the indicated concentration for 6 hours. Transduction with DsiRNA-Transductin complex was performed and the cells were harvested 24 hours later. Data were analyzed by normalizing HPRT mRNA levels to NC1-treated samples (three biological replicates, in triplicate). *** p < 0.001, p < 0.03 (student’s t-test).
